Author index

Volume 42 (1997)

Bonaly, A. **42**, 191
Bounias, M. **42**, 191

Collado-Vides, L. **42**, 19
Conrad, M. **42**, 177

Gómez-Alcaraz, G. **42**, 19
Gómez-Gutierrez, V. **42**, 19

Hagan, S. **42**, 65

Jibu, M. **42**, 65

Klimontovich, Y.L. **42**, 85, 141
Kurganov, B.I. **42**, 103

Lyubarev, A.E. **42**, 103

Matsuno, K. **42**, 119, 129
Meacham, C.A. **42**, 1

Nussinov, M.D. **42**, 111

Olypher, A.V. **42**, 9
Otroshchenko, V.A. **42**, 111

Parisi, J. **42**, 145, 207
Pramanik, S. **42**, 1

Rivas-Lechuga, G. **42**, 19
Rössler, O.E. **42**, 207

Santoli, S. **42**, 77, 111
Satarić, M.V. **42**, 153
Sept, D. **42**, 153
Sipper, M. **42**, 29

Tadaki, K. **42**, 45
Trpišová, B. **42**, 153
Tsuda, I. **42**, 45
Tuszynski, J.A. **42**, 153

Vasil'ev, V.A. **42**, 141

Yasue, K. **42**, 65

Zhong, Y. **42**, 1

BioSystems

Subject index

Volume 42 (1997)

Asynchronicity; Cohesion; Consumer; Duration; Measurement; Replication; Semantics; Syntax **42**, 129

Biochemical organization; Origin of life; Protocell; Metabolism **42**, 103

Biodynamics; Consumers; Entropy; Evolution; Heat Engine; Information; Thermal Fluctuations **42**, 119

Biological self; Physical existence; Closed sets; Equivalence classes; Order relations; Homotopic groups; Poincaré groups; Fixed points; Brain structure/function relationships **42**, 191

Boson condensation of evanescent photons; Massive evanescent photon; Dynamically ordered water; Spontaneous symmetry breaking; Cellular vision; Life **42**, 65

Bostrychia radicans; Clonal growth; Graphical schemes; Lindenmayer systems **42**, 19

Brain structure/function relationships; Physical existence; Closed sets; Equivalence classes; Order relations; Homotopic groups; Poincaré groups; Fixed points; Biological self **42**, 191

Cellular programming; Non-uniform cellular automata; Evolutionary computation; Complex adaptive systems; Evolware **42**, 29

Cellular vision; Massive evanescent photon; Dynamically ordered water; Spontaneous symmetry breaking; Boson condensation of evanescent photons; Life **42**, 65

Chaos and order; Open systems; Criterion of order; Norm of chaos **42**, 85

Chaotic functional map; Threshold; Patchy and folding map; Logic-dynamics transformation; Internal observer **42**, 45

Classification tree; Tree comparison; Dendrogram; Overall similarity; Taxonomic database **42**, 1

Clays; Origin of life; Soliton impulse; Emergence; Regolith; Nanoreactors **42**, 111

Clonal growth; *Bostrychia radicans*; Graphical schemes; Lindenmayer systems **42**, 19

Closed sets; Physical existence; Equivalence classes; Order relations; Homotopic groups; Poincaré groups; Fixed points; Biological self; Brain structure/function relationships **42**, 191

Cohesion; Asynchronicity; Consumer; Duration; Measurement; Replication; Semantics; Syntax **42**, 129

Complex adaptive systems; Non-uniform cellular automata; Cellular programming; Evolutionary computation; Evolware **42**, 29

Consumer; Asynchronicity; Cohesion; Duration; Measurement; Replication; Semantics; Syntax **42**, 129

Consumers; Biodynamics; Entropy; Evolution; Heat Engine; Information; Thermal Fluctuations **42**, 119

Criterion of order; Chaos and order; Open systems; Norm of chaos **42**, 85

Dendrogram; Tree comparison; Classification tree; Overall similarity; Taxonomic database **42**, 1

Duration; Asynchronicity; Cohesion; Consumer; Measurement; Replication; Semantics; Syntax **42**, 129

Dynamically ordered water; Massive evanescent photon; Spontaneous symmetry breaking; Boson condensation of evanescent photons; Cellular vision; Life **42**, 65

Einstein–Podolsky–Rosen correlations; Human brain; Quantum measurement **42**, 207

Emergence; Origin of life; Soliton impulse; Regolith; Clays; Nanoreactors **42**, 111

Entropy; Biodynamics; Consumers; Evolution; Heat Engine; Information; Thermal Fluctuations **42**, 119

Equivalence classes; Physical existence; Closed sets; Order relations; Homotopic groups; Poincaré groups; Fixed points; Biological self; Brain structure/function relationships **42**, 191

Evolutionary computation; Non-uniform cellular automata; Cellular programming; Complex adaptive systems; Evolware **42**, 29

Evolution; Biodynamics; Consumers; Entropy; Heat Engine; Information; Thermal Fluctuations **42**, 119

Evolware; Non-uniform cellular automata; Cellular programming; Evolutionary computation; Complex adaptive systems **42**, 29

Fixed points; Physical existence; Closed sets; Equivalence classes; Order relations; Homotopic groups; Poincaré groups; Biological self; Brain structure/function relationships **42**, 191

Fluctuon model; Origin of life; Quantum mechanics; Gravity; Self-organization; Nanobiology **42**, 177

Forced oscillations; Neural oscillator **42**, 9

Graphical schemes; *Bostrychia radicans*; Clonal growth; Lindenmayer systems **42**, 19

Gravity; Origin of life; Quantum mechanics; Fluctuon model; Self-organization; Nanobiology **42**, 177

Heat Engine; Biodynamics; Consumers; Entropy; Evolution; Information; Thermal Fluctuations **42**, 119

Homotopic groups; Physical existence; Closed sets; Equivalence classes; Order relations; Poincaré groups; Fixed points; Biological self; Brain structure/function relationships **42**, 191

Human brain; Einstein–Podolsky–Rosen correlations; Quantum measurement **42**, 207

Information; Biodynamics; Consumers; Entropy; Evolution; Heat Engine; Thermal Fluctuations **42**, 119

Internal observer; Threshold; Patchy and folding map; Logic-dynamics transformation; Chaotic functional map **42**, 45

Life; Massive evanescent photon; Dynamically ordered water; Spontaneous symmetry breaking; Boson condensation of evanescent photons; Cellular vision **42**, 65

Lindenmayer systems; *Bostrychia radicans*; Clonal growth; Graphical schemes **42**, 19

Logic-dynamics transformation; Threshold; Patchy and folding map; Internal observer; Chaotic functional map **42**, 45

Massive evanescent photon; Dynamically ordered water; Spontaneous symmetry breaking; Boson condensation of evanescent photons; Cellular vision; Life **42**, 65

Measurement; Asynchronicity; Cohesion; Consumer; Duration; Replication; Semantics; Syntax **42**, 129

Metabolism; Biochemical organization; Origin of life; Protocell **42**, 103

Microtubules; Self organization; Tubulin; Modeling **42**, 153

Modeling; Microtubules; Self organization; Tubulin **42**, 153

Nanobiology; Origin of life; Quantum mechanics; Gravity; Fluctuon model; Self-organization **42**, 177

Nanoreactors; Origin of life; Soliton impulse; Emergence; Regolith; Clays **42**, 111

Neural oscillator; Forced oscillations **42**, 9

Non-equilibrium phase transitions; Self-organized criticality; Pattern formation; Semiconductor breakdown **42**, 145

Non-linear self-oscillators; *S*-theorem; Order and chaos; Tubules **42**, 141

Non-uniform cellular automata; Cellular programming; Evolutionary computation; Complex adaptive systems; Evolware **42**, 29

Norm of chaos; Chaos and order; Open systems; Criterion of order **42**, 85

Open systems; Chaos and order; Criterion of order; Norm of chaos **42**, 85

Order and chaos; *S*-theorem; Non-linear self-oscillators; Tubules **42**, 141

Order relations; Physical existence; Closed sets; Equivalence classes; Homotopic groups; Poincaré groups; Fixed points; Biological self; Brain structure/function relationships **42**, 191

Origin of life; Biochemical organization; Protocell; Metabolism **42**, 103

Origin of life; Quantum mechanics; Gravity; Fluctuon model; Self-organization; Nanobiology **42**, 177

Origin of life; Soliton impulse; Emergence; Regolith; Clays; Nanoreactors **42**, 111

Overall similarity; Tree comparison; Classification tree; Dendrogram; Taxonomic database **42**, 1

Patchy and folding map; Threshold; Logic-dynamics transformation; Internal observer; Chaotic functional map **42**, 45

Pattern formation; Self-organized criticality; Non-equilibrium phase transitions; Semiconductor breakdown **42**, 145

Physical existence; Closed sets; Equivalence classes; Order relations; Homotopic groups; Poincaré groups; Fixed points; Biological self; Brain structure/function relationships **42**, 191

Poincaré groups; Physical existence; Closed sets; Equivalence classes; Order relations; Homotopic groups; Fixed points; Biological self; Brain structure/function relationships **42**, 191

Protocell; Biochemical organization; Origin of life; Metabolism **42**, 103

Quantum measurement; Einstein–Podolsky–Rosen correlations; Human brain **42**, 207

Quantum mechanics; Origin of life; Gravity; Fluctuon model; Self-organization; Nanobiology **42**, 177

Regolith; Origin of life; Soliton impulse; Emergence; Clays; Nanoreactors **42**, 111

Replication; Asynchronicity; Cohesion; Consumer; Duration; Measurement; Semantics; Syntax **42**, 129

Self organization; Microtubules; Tubulin; Modeling **42**, 153

Self-organization; Origin of life; Quantum mechanics; Gravity; Fluctuon model; Nanobiology **42**, 177

Self-organized criticality; Pattern formation; Non-equilibrium phase transitions; Semiconductor breakdown **42**, 145

Semantics; Asynchronicity; Cohesion; Consumer; Duration; Measurement; Replication; Syntax **42**, 129

Semiconductor breakdown; Self-organized criticality; Pattern formation; Non-equilibrium phase transitions **42**, 145

Soliton impulse; Origin of life; Emergence; Regolith; Clays; Nanoreactors **42**, 111

Spontaneous symmetry breaking; Massive evanescent photon; Dynamically ordered water; Boson condensation of evanescent photons; Cellular vision; Life **42**, 65

***S*-theorem**; Order and chaos; Non-linear self-oscillators; Tubules **42**, 141

Syntax; Asynchronicity; Cohesion; Consumer; Duration; Measurement; Replication; Semantics **42**, 129
